

ABSTRACT OF THE DISCLOSURE

The invention concerns a single-piece tractor weight (M) comprising an upper surface (1), a base (2), two surface oriented transversely relative to the advancing direction of the tractor and two side surfaces comprising a transverse eye bolt or pin (7, 8) constituting an engagement means for lifting the tractor; the weight (M) comprises at least one housing (L1, L2) emerging on the outside and oriented so as to receive at least one lifting branch (B1, B2) of a load handling device and to enable the weight to be lifted and handled through co-operation between the housing and the lifting branch.
